## River Otter Adaptations

### Concepts

Animals have body parts suited for their lifestyle and habitat.

### Objectives

Students will be able to:

- List at least 3 otter body parts that make this animal well-adapted to its aquatic habitat.
- Determine which otter body parts and adaptations are not necessarily related to life in the water.

### Illinois Social Studies Standards

SS.4.G.1, SS.5.G.1, SS-6-8.G.1.LC, SS.6-8.G.1. MdC, SS.6-8.G.1.MC

### Next Generation Science Standards

3-LS3-2, 3-LS4-3, 4-LS1-1, MS-LS1-4

### Materials

Copies of the River Otter photo and River Otter Body Parts and Adaptations diagram. A set of Otter Matching Cards for each group of students playing the game.

### Space

Classroom

### Activity

Have the students look at the photo of the River Otter. Ask them what parts of an otter's body make them well-suited to spend much of their time in water. Ask the students to review the Otter Body Parts animal diagram, then give them a set of cards and read them the instructions below.

### How to play the game

Divide the students into groups of 2 to 4 students. Provide a set of cards to each group playing the game.

This game is played like the card game "Concentration." Shuffle the cards and spread them face down on the table. Each student takes a turn turning up 2 cards, leaving them in place on the table. The object is to match a body part card with the adaptation. If a student makes a match, the student keeps the 2 cards and turns over 2 more. If the student does not make a match, the cards are turned blank side up and the next player takes a turn. You may wish to encourage students to provide clues to each other or to work in teams. The game ends when there are no more matches to be made.

### **Follow Up**

Not all the otter body parts represent adaptations to aquatic life. After playing the game, have students discuss which otter adaptations are unique to aquatic life, and which are not.

Discuss with the students what body parts they think humans have that make them suited to live on land.

What things do humans sometimes use to be better suited for swimming in water? (e.g., goggles, bathing caps, flippers, scuba tanks or snorkels)

**Evaluation:**

<b>Group:</b>				
	<b>Participation</b>	<b>Group Discussion</b>	<b>Class Discussion</b>	<b>Score</b>
<b>4 – Excellent</b>	All group members participate in the activity and are engaged.	All group members are engaged in discussion with each other, bringing up new ideas and extending where possible.	Group is engaged in the class discussion and talks about different ideas and conclusions made by their own group following the activity.	
<b>3 – Good</b>	Most group members participate in the activity.	Most group members are engaged in a productive conversation with each other on the topic.	Group is mostly engaged in the class discussion and shares some thoughts on the topic.	
<b>2 – Needs improvement</b>	Some group members participate in the activity. Others are not engaged.	Some group members are engaged in a conversation.	Group is somewhat engaged in the class discussion.	
<b>1 – Poor</b>	Group does not follow directions or participate actively.	Group is off-topic or is not engaged.	Group barely participates in the class discussion.	
<b>0 – No attempt</b>	Group does not participate in the activity.	Group does not discuss together.	Group does not participate in the class discussion.	
				<b>Grand total ____/12</b>

Body Part

**Very thick  
fur**

Body Part

**Webbed  
feet**

Body Part

**Sharp teeth**

Body Part

**Sharp claws**

Body Part

**Long,  
muscular  
tail**

Body Part

**Eyes on  
top of head**

Body Part

**Small ears  
on top of  
head that can  
be closed**

Body Part

**Long  
whiskers**

Body Part

**Heart**

**Beat is  
slower  
heartbeat  
underwater**

Body Part

**Streamlined  
body shape**

Body Part

**Voice**  
Described as a  
chuckling  
sound

Body Part

**Scent  
glands**

Body Part

**Nostrils  
that can be  
tightly  
closed**

Body Part

**Brown fur**

Body Part

**Eye lenses  
that change  
shape**

Body Part

**Nose -  
Sense of  
smell**

# River Otter Body Parts and Adaptations

**Eyes** - On top of head so otter can see when swimming on surface. Eyes can also change shape to compensate for seeing under water

**Ears** - Small and on top of head. Can be closed to keep water out when swimming

**Thick fur** - 156,00 hairs per square inch, provides insulation.

**Brown fur** - Helps camouflage animal in woods, and is less visible in water

**Nose** - Nostrils can be closed to keep water out. Sense of smell helps otters find food on land.

**Teeth** - Sharp, for catching and holding fish and other prey

**Whiskers** (also called vibrissae) - Detect motion underwater. Help otters feel surroundings in dark dens

**Voice** - "Chuckling" sounds help otters communicate to each other

**Heart** - Beat can be slowed during a dive to conserve oxygen, so otters can stay underwater for up to 8 minutes

**Claws** - Catch and hold food. Also for digging out dens.

**Feet** - Webbing between toes pushes more water as otters paddle

**Body shape** - Streamlined body shape reduces resistance in water

**Tail** - Long and muscular. Serves as rudder for steering and for swimming power

**Scent glands** - Located under tail. Used to mark territory.
